

NGUYEN THI ANH PHUNG

AI ENGINEER | AI PRODUCT DEVELOPER

+84 926675245
anhphung26122005@gmail.com
Cat Lai ward, Thu Duc district,
Ho Chi Minh city, Viet Nam

SUMMARY

A forward-thinking IT student bridging Fullstack Engineering and AI Innovation. Proficient in Python, TypeScript, React, and LLM integrations (OpenAI/LangChain APIs). Passionate about designing user-centric AI products, optimizing RAG architectures, and building scalable end-to-end applications with a strong quality-first mindset.

SKILLS

AI & DATA

- OpenAI API, LangChain/LlamaIndex, Prompt Engineering, Vector Databases, RAG Architecture, Basic Machine Learning (Scikit-Learn/Pandas)

Development & Infrastructure

- Python, TypeScript, React.js, Node.js, RESTful APIs, GitHub, Vercel/Render/Docker, mongoDB Atlas, PostgreSQL

Product & QA

- Agile/Scrum, API Testing, User Flow Optimization, System Analysis & Design

EDUCATION

Major of Computer Science

University of Greenwich
2023 - Present

Bachelor of Computer Science

University of Greenwich
2028

CERTIFICATE

Google Analytics Certification

Credential ID 183018996

Certificate of Merit – The Best Student
of Web Programming 1

TECHNICAL PROJECTS

Weather Cast

- Built a real-time weather web featuring a modern Glassmorphism UI with dynamic visual effects
- Optimized for all devices (Mobile/ Desktop) using Tailwind's responsive breakpoints
- Integrated OpenWeather API with secure Environment Variable handling on Vercel
- Established CI/ CD via Github and Vercel for automated, high-quality deployments.

Currency Premium with AI

- Engineered an AI-driven financial application by integrating Google Gemini LLM to provide real-time, context-aware interactive chat and intelligent numerical-to-text translations.
- Optimized Zero-Shot Prompts to enforce strict multilingual natural language generation across 6 languages, effectively eliminating model hallucinations and ensuring output formatting consistency.
- Architected a robust AI orchestration layer using Python and FastAPI to securely manage LLM API communications and handle complex data serialization between the client and the model.
- Designed resilient AI error handling mechanisms to manage LLM edge cases, including automated fallbacks and graceful degradation during API rate limits (HTTP 429 Quota Exceeded) to ensure a seamless user experience.

CAD Drawing Extractor with AI

- Architected and developed an automated web-based engine using Python (FastAPI) to extract and structure Bill of Materials (BOM) data from raw AutoCAD (DWG/DXF) and PDF blueprints.
- Engineered robust parsing algorithms utilizing ezdxf, pdfplumber, and Complex Regex to identify spatial key-value pairs and filter mechanical attributes (Material, Dimensions, Mass) with 100% accuracy, bypassing manual data entry.
- Containerized and deployed the microservices architecture using Docker to integrate the Linux-based ODA File Converter; successfully hosted the Backend API on Render and the Frontend UI on Vercel.
- Business Impact: Automated the engineering workflow, reducing BOM compilation time by over 90% and completely eliminating human errors in material calculations.
